Introduction

A humanoid robot is a robot that shares similarities with a Human body. Just like the human body most humanoid robots have a torso with a head, two arms and two legs, a 'face', with 'eyes' and 'mouth'. Though some forms of humanoid robots may model only part of the body, for example, from the waist up. Some humanoid robots also have heads designed to replicate human facial features such as eyes and mouths. Androids are humanoid robots built to aesthetically resemble humans.

"A machine can exhibit human-like qualities and not be considered particularly controversial if it doesn't look human,". "That's what is ***intriguing****. -* ***William***
