Data Management With Mobile Devices

Vocabulary

Repository- a place where things are deposited, stored, or offered for sale.

Stagger- to cause to waver or falter.

To contest- strife in argument; dispute; controversy.
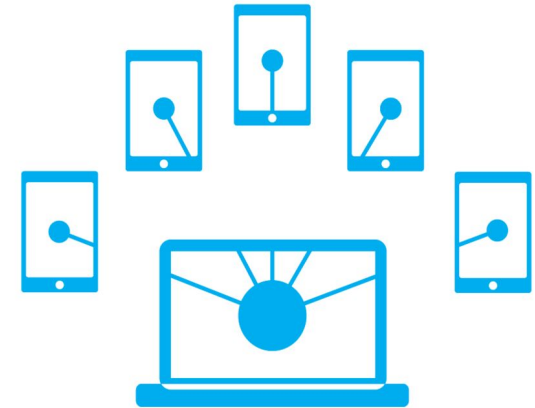

Amass- to collect into a mass or pile; gather.

Invade- to enter as if to take possession.

Intrude- to thrust or bring in without invitation, permission, or welcome.

Introduction

Mobile technology has accelerated the pace at which individuals access, acquire and generate information. Users' cell phones are currently rich **repositories** of memories and content that chronicle their lives.

A **staggering** archive of personally acknowledgeable data exists concerning cell users —a reality that's both the consequence of and driving force of the networked age. As nearly one-fifth of cell owners (17%) use their mobile phone for many of their online browsing, privacy and data management on mobile devices is progressively rising as a **contested** arena for policymakers, business leaders and therefore the public.
